## ANNEX

### Survey Results:

### The key contribution of regions and cities to sustainable development

From 13 December 2018 to 1 March 2019, the European Committee of the Regions (CoR) in cooperation with the Organisation for Economic Cooperation and Development (OECD) carried out an online survey on "***The key contribution of regions and cities to sustainable development***".

The survey was aimed towards representatives of local and regional authorities as well as other stakeholders at local and regional level, and concerned their work on sustainable development (SD) and in particular in relation to their contribution to the Sustainable Development Goals (SDGs).

The key results of the survey are summarised in the separate Results Note while the present ANNEX gathers the detailed figures.

The results of the survey will also feed the final report of the OECD Programme on [A Territorial Approach to SDGs. A Role for cities and regions to leave no one behind](#).

The note was drafted by CoR and OECD staff. It does not necessarily reflect the views of these organisations.

The CoR authors would like to thank nrg4SD, whose own 2018 survey on "[Localizing the SDGs: regional governments paving the way](#)" was a useful reference for this work.

*Please note: The distribution of respondents among countries and levels of government is unbalanced and the respondents do not form a statistically representative sample. The aim of this survey is rather to offer a useful snapshot of the views expressed by local and regional stakeholders regarding the SDGs and their implementation.*
