The key role of cities and Regions in addressing Climate change while implementing SDGs

1. After a long story, was presented in April 2018
2. The whole Government programme has been linked to the 17 SDGs
3. The implementation of the agenda is followed yearly by means of the monitoring of its fulfilment in every Department of the Basque Government

4. Basque Climate Change Strategy to 2050

VISION to 2050

The Basque Country has a low-carbon competitive economy, which is **adapted to climate effects** as a result of the consolidation of a knowledge-based climate change policy, which has allowed the opportunities offered by innovation and technological development to be seized.

This has been possible thanks to the **co-responsibility of all stakeholders** of Basque society, driven by the **exemplary action of the Public Administration**.

Take urgent action to combat climate change and its impacts

Implementation of the AGENDA 2030 LOCAL

A Process developed in 4 steps

1. Explore the potential of the SDGs from the municipal reality
2. Elaborate the strategy AGENDA 2030 LOCAL
3. Put into practice the AGENDA 2030 LOCAL Plan
4. Measure and follow up of how SDGs, improving the governance al local level

AGENDA 2030 LOCAL

Adressing Climate Change vs Implementing SDGs

The objectives of SDGs 13 and 11 are compared with actions included in the KLIMA2050 Strategy

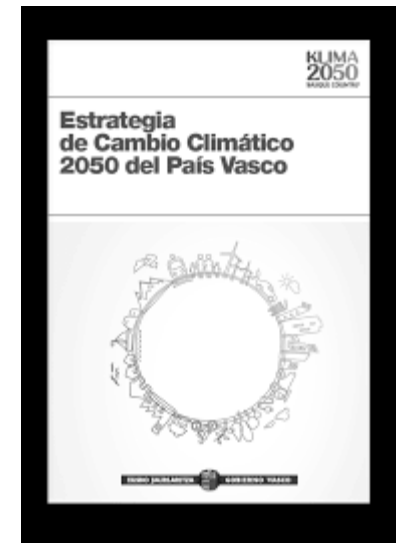

The municipalities develop local plans for mitigation and adaptation to Climate Change

The plans must be adapted to the action plans deployed from the KLIMA Strategy (Now, Plan 2016-2020)

The follow up of local plans is measured at local level but the Regional Strategy KLIMA2050 measures the global fullfilment.
