Smart Villages
Integrated strategic approaches to innovation in rural areas

29 January
Enrique Garcilazo, Head of OECD Regional and Rural Unit
Center for Entrepreneurship, SME’s Regions and Cities
@Garilazo_OECD, #OECDRural
1. What does the data tell us?

2. Policy responses for smart villages
Rural and urban areas are deeply interdependent...

- In OECD countries, 26% of population live in PR regions (297 million)
- Around 80% of rural population (235 million) lives close to a city
- 6% of the rural population (62 million) in remote rural regions

Sources: OECD Regional Outlook, (2016)
Rural regions can be sustainable ...

... but rural remote face demographic pressures.
Rural remote regions face demographic challenges

Population ageing is particularly affecting rural regions

Elderly dependency ratios (people older than 65 over people between 15 and 64) by type of region, 2017

Note: Last available year was 2016 for Japan, Australia, New Zealand, and the United States.

Distance and density key for service delivery...

<table>
<thead>
<tr>
<th>Factor</th>
<th>How it impacts service delivery costs</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Distance</strong></td>
<td>All forms of connectivity are scarcer and accessibility to rural areas more expensive. Transportation costs and overall costs to provide goods and services are higher in rural areas on a per capita basis.</td>
</tr>
<tr>
<td><strong>Low population</strong></td>
<td>It is difficult to achieve scale economies of production of goods and services including public services.</td>
</tr>
<tr>
<td><strong>Low density</strong></td>
<td>In rural regions people tend to be dispersed or even scattered across much of the territory, making connectivity harder to achieve.</td>
</tr>
<tr>
<td><strong>Ageing population</strong></td>
<td>As the population ages the mix of services demanded changes; this may require new investments or outlays especially concerning healthcare.</td>
</tr>
<tr>
<td><strong>Diminishing subsidies</strong></td>
<td>In the aftermath of the global financial crisis, governments are cutting expenditures. This has an obvious impact on government services and costs.</td>
</tr>
<tr>
<td><strong>Increasing diversity</strong></td>
<td>Rural populations are becoming more diverse, representing a mix of residents historically rooted in the region, newly retired people, second home residents or newcomers who commute to a city for work. The result is a fragmenting of demand and a population where significant numbers of people choose to obtain goods and services away from the place where they live.</td>
</tr>
<tr>
<td><strong>Few service providers</strong></td>
<td>Choice is valuable. Too often rural service providers seek to exploit a local monopoly situation while paying little attention to actively marketing their business or improving the quality of service they provide.</td>
</tr>
</tbody>
</table>

- **Strategic solutions**
- **Economies of scope**
- **Long term planning**
- **Integrated solutions**
Rural regions perform well on several dimensions of wellbeing

- Rural dwellers have better environment conditions and more affordable housing
- Jobs and income in line with urban dimension
- Rural regions lag in access to services, safety, health and education
Rural villages key drivers for the rural economy...

- Tradable activities are key for rural close to cities and remote rural
- A minimum level of density is key for economies of scale/scope and delivery of goods and services.

Sources: OECD Regional Outlook, (2016)
Innovation can also occur in remote rural places.

**Patents (inventor address) and medium travel time, TL3 regions, 2018**

Preliminary results: please do not quote.
1. What does the data tell us?
   • Research methods, data and definitions
   • Trends and diagnosis

2. Policy responses for smart villages
Rural policies must be forward looking
Digitalisation is key but it must be embedded into a broader “place-based” approach

- Broader approach to wellbeing provision
- Strategic approach to service provision
  - Digitalisation
  - Skills and digital update
  - Spatial planning
  - Demographic projections
  - Empowering rural communities
- Rural proofing not sufficient but is needed for digital broadband
Many countries are reforming in this direction, but implementation is still difficult.

At the territorial scale

Regional growth and convergence

Innovation

Business environment

Human capital formation

Infrastructure and ICT

Urban rural linkages

Bottom up -- mobilisation of resources and natural capital

- Metropolitan areas
- Rural close to cities
- Rural remote

Demographic projections
Lessons for service provision

- Exploiting synergies: consolidation, co-location or merging similar services matching with available demand in rural areas.
- Alternative delivery mechanisms. Where demand for services is widely dispersed, bring service to the user. (e.g. adopting mobile service delivery approaches, telemedicine).
- Demographic trends and forward looking policies. LT cost enhancing efficiency in service provision (planning, ICT, ROI).
- Community-based solutions for different types of providers. E.g. volunteer fire departments, community owned shops provide services and operate as social enterprises.
- Improve quality and marketing. Technology can help rural residents access information about service quality and alternative providers.
- Alternative energy sources by allowing isolated communities to produce their own energy instead of importing expensive conventional fuels.
- Innovate - create a new service to achieve better outcomes. Insufficient business to support a full range of services, but travelling handyman scheduled by telephone or Internet might flourish.
thank you
