Report on

Digitalisation of the SMEs in the Mediterranean region

The report was drawn up by Lizzy Delaricha, Mayor of Ganei Tikva (Israel), rapporteur, and adopted by a consensus at the 12th ARLEM plenary session, held in a fully remote format on 22 February 2021.
Introduction and Background

Today, 99% of businesses are micro, small and medium sized enterprises and only 1% are large businesses. Small-Medium Enterprises (SMEs) are usually less innovative, find it difficult to reinvent themselves, and often do not have the budget that is at the disposal of larger organisations. Yet, they are the core of the economy. When they are innovative and strong, they create more jobs, reduce production expenses, grow profitability, adapt their business model to the ecosystem, and increase their access to sources of finance. Their success in overcoming the digital and innovation obstacles is not only a task for business owners, but for society at large, and for local authorities' mayors in particular. The role of local government leaders is to help businesses overcome five main obstacles and promote local solutions.

This report focuses on obstacles and solutions and was written by the Israeli Mayor of Ganei Tikva, Ms Lizzy Delaricha.

Organising Framework (Why Is It Important?)

When the local authorities' mayors request that a change is made, they face numerous challenges, one of which is the ability to correctly identify how to lead the process. To do this properly, four stages should be followed.

- **Why?** – Studying and understanding the obstacles faced by local authorities, especially when it comes to helping businesses enter the digital world. To do this right, we must understand why the change is necessary and what needs it creates. Only then is it possible to move to the next stage.
- **What?** – The next step in the path to create change in a local authority, before managing the process itself, is to define the desired results and the expected strategy.
- **Who?** – The third stage in the change process is to clearly define the stakeholders. The ability to understand who will be affected by the change and who will be involved is critical for continuity (possible entities that may be involved are the local authority, the government, businesses, entrepreneurs, donors, the public at large, and others).
- **How?** – The fourth step in the process towards innovation has to do with the How. How can we implement the process successfully? How will we do it and get businesses to move towards digital? How can we ensure continuity? And how can we promote an ongoing implementation of the programme that creates value and can be properly measured?

The order of the stages is critical. Only by beginning with the Why will the local authority be able to ascertain throughout the process that it is working towards a realisable goal, rather than choose a path in advance and then try to justify its rationale.

---

1 The full version of the report can be found (in English) [here](#). The study committed to CASE on support of the report can be found (in English) [here](#).
After answering these four questions, barriers can be found in five dimensions. The five main dimensions that local authorities must take into consideration to promote digitalisation among its businesses are:

<table>
<thead>
<tr>
<th>1#</th>
<th>2#</th>
<th>3#</th>
<th>4#</th>
<th>5#</th>
</tr>
</thead>
<tbody>
<tr>
<td>Regulation and Aiding SMEs</td>
<td>Building an Ecosystem</td>
<td>Identifying Social Groups</td>
<td>Quick Transition to Digital</td>
<td>Increased Dialogue in the Ecosystem</td>
</tr>
</tbody>
</table>

**Dimension 1: Promoting Regulation and Aiding SMEs**

A significant aspect in the promotion of businesses towards innovation and digitalisation demands understanding what the commitment of the local authority towards those businesses is. And more than that, whether it is a driving or an immobilising force. The first two dimensions (this one and the one after it) deal with the ability of the local authority to effect a structural change that focuses on legislation, regulation, and on creating fast or hindering tracks. Local and regional authorities (LRA) should focus on local regulations and on regional aspects, and even at state administrative level.

**Why Are These Important? Eight Possible Obstacles for Local Authorities**

The following are some obstacles detected during the study among local authorities in the Mediterranean:

1. there is no strategy for developing and promoting entrepreneurship and innovation;
2. local authorities are not part of the national digitalisation effort;
3. local authorities do not have the budget, are not digitalised and are immersed in bureaucracy;
4. lack of legislation to protect the rights of entrepreneurs and encourage innovation;
5. governments are slow in adopting legislation on digitalisation in the private sector;
6. lack of available and reliable data about digitalisation;
7. non-transparent, outdated public procurement processes, and
8. the size of the shadow economy (black market).

If you encounter one of these obstacles in your local authority or identify them as a factor that prevents businesses from transitioning to digital, you can adopt one of the following solutions. When these are the obstacles, the right connections should be made.
## What Can You Do? Seven Relevant Solutions

<table>
<thead>
<tr>
<th>Dimension</th>
<th>Obstacles (Why)</th>
<th>Solution (What)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Promote Regulation and aid SMEs</td>
<td>(1) No strategy</td>
<td>Prepare a national plan for digitalisation with the cooperation of local authorities. It is important that the plan is connected to regional digital strategies as well as to government agencies.</td>
</tr>
<tr>
<td></td>
<td>(2) National digitalisation effort</td>
<td>Collaborate with local authorities and authorise them to be part of the government's digitalisation efforts</td>
</tr>
<tr>
<td></td>
<td>(3) Bureaucratic</td>
<td>Promote electronic government services and digitalisation of public administration</td>
</tr>
<tr>
<td></td>
<td>(4) Rights of entrepreneurs</td>
<td>The government must facilitate processes for establishing SMEs Reinforce the protection of patents and promote effective competition laws</td>
</tr>
<tr>
<td></td>
<td>(5) Legislation</td>
<td>Develop a national digitalisation plan in cooperation with local authorities</td>
</tr>
<tr>
<td></td>
<td>(6) Public data</td>
<td>Adding local authorities to the effort of mapping businesses</td>
</tr>
<tr>
<td></td>
<td>(7) Procurement</td>
<td>Protecting patents and promoting effective competition laws</td>
</tr>
<tr>
<td></td>
<td>(8) Shadow economy</td>
<td>Creating incentives for digital transformation</td>
</tr>
</tbody>
</table>

### Dimension 2: Building an Ecosystem and Reinforcing its Key Players

Another major aspect is the ability to define a specific issue where the municipal ecosystem should focus. The more the local authority is able to define a specific area it wants to lead at regional, national and global level, the easier it will be to enlist important players, help promote innovation and online transformation, with an emphasis on the core topics selected.

### Why Are These Important? Two Possible Obstacles for Local Authorities

According to local authorities in the Mediterranean, there are two obstacles in this area:

1. Difficulty obtaining access to finance among businesses;
2. Lack of donor support for the long-term success of businesses.

When a local authority is not focused on a specific issue, it is difficult for additional players to take part in and encourage the effort. When these are the obstacles, the emphasis should be on empowerment.
What Can You Do? Five Relevant Solutions

<table>
<thead>
<tr>
<th>Dimension</th>
<th>Obstacles (Why)</th>
<th>Solution (What)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Building an Ecosystem and Reinforcing Its Players</td>
<td>Financing</td>
<td>Governments must improve access to credit for young and innovative entrepreneurs. Building a platform that connects between players (entrepreneurs-investors-government-local authority). An added value can be created by building cooperation between Innovation and Technological Centres and businesses within the city. Innovation ecosystem actors should be involved in Digital Innovation Hubs, especially at local and regional level. Help by the local authority so that entrepreneurs can find sources of finance (providing information about international financing programmes in local platforms, technical assistance submitting requests)</td>
</tr>
<tr>
<td></td>
<td>Long term</td>
<td>International donors must focus their activity vis-à-vis the needs of the authorities (needs, due diligence, training) International donors for digital processes must join representatives of local authorities who are familiar with the field (and promote collaborations between authorities, associations and organisations)</td>
</tr>
</tbody>
</table>

Dimension 3: Mapping Social Groups and Encouraging Their Growth

The third aspect focuses on the ability to identify different groups in the municipal arena, empower them and understand their needs. This helps to better find the required skills, those things that enable a city to operate better, and to create empowering social partnerships that can reinforce the relationships between businesses in the city.

Why Are These Important? Three Possible Obstacles for Local Authorities

According to the study of local authorities in the Mediterranean, there are three possible obstacles in this dimension:

- (11) Inappropriate skills and capabilities;
- (12) Lack of cooperation between universities, research centres and the private sector;
- (13) Business owners who do not understand the importance of digitalisation.

When the skills are not relevant and there are no partnerships, when businesses themselves do not understand the value of digital, the main issue here is trust.

<table>
<thead>
<tr>
<th>Dimension</th>
<th>Obstacles (Why)</th>
<th>Solution (What)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mapping Social Groups and Encouraging Their Growth</td>
<td>(11) skills</td>
<td>Connecting between stakeholders (public, businesses, academy, institutions), government and local authorities. Developing training for communication, critical thinking, customer service, science in the local education system. Building more talents can push SMEs in the right direction, and help them close the digital gap.</td>
</tr>
<tr>
<td></td>
<td>(12) cooperation</td>
<td>Repository of international case studies supervised by the European Union describing how the change is led by local authorities. Cooperation and learning between cities; creating a repository of case studies about businesses that transitioned to digital.</td>
</tr>
<tr>
<td></td>
<td>(13) importance</td>
<td>Promoting digitalisation in the bank sector and encouraging financial education and inclusion.</td>
</tr>
</tbody>
</table>

Dimension 4: Encouraging SMEs to Enter the Digital Age and Promote Innovation

Once the right infrastructure and the players in the ecosystem are in place, and the groups are empowered, the fourth dimension is to help SMEs drive innovation. Here the local authority wears the hat of innovation-enabler.

Why Are These Important? Four Possible Obstacles for Local Authorities

Mediterranean local authorities face several possible obstacles when they attempt to promote innovation:

- (14) Internet connections are expensive, slow and unavailable;
- (15) Digital divide and differences in connectivity between cities (concentration of innovation and digitalisation in large cities);
- (16) Shortage of digital platforms to connect entrepreneurs and investors;
- (17) Slow adoption of digital applications by businesses.

These obstacles in fact indicate that the local authority must promote subjects that will help it become an enabler.
## What Can You Do? Seven Relevant Solutions

<thead>
<tr>
<th>Dimension</th>
<th>Obstacles (Why)</th>
<th>Solution (What)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Encouraging SMEs to Go Digital and Promote Innovation</td>
<td>(14) Connections</td>
<td>Improve <strong>connectivity</strong> and access to fast, reliable and cost-effective communications.</td>
</tr>
<tr>
<td></td>
<td>(15) Digital divide</td>
<td>Create <strong>incentives</strong> for digital transformation of businesses. Accelerating the process of technological adoption and helping SMEs to build innovation is key to ensure that SMEs remain competitive and are not late for market innovation.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Promote <strong>electronic trade</strong> and virtual markets that replace physical stores.</td>
</tr>
<tr>
<td></td>
<td>(16) Digital platforms</td>
<td>Promote <strong>digitalisation in the bank sector</strong> and encourage financial education and inclusion.</td>
</tr>
<tr>
<td></td>
<td>(17) Slow adoption</td>
<td>Repository of <strong>international case studies</strong> supervised by the European Union describing how the change is led by local authorities.</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Training</strong> on communications, critical thinking, customer service, science in the local education system.</td>
</tr>
</tbody>
</table>

### Dimension 5: Dialogue between Local Authorities and Businesses and among Businesses

The fifth dimension has to do with the connection and communication between the players. We surveyed this dimension that creates a good regulatory framework, obstacles that may be related to the mapping of players in the ecosystems, understanding of the needs of the different groups, and the ability to lead businesses to venture into the digital world. The last group of obstacles in this dimension focuses on the ability to create more connections between the players themselves.

**Why Are These Important? Possible Obstacle for Local Authorities**

There is a single main obstacle here according to local authorities of the Mediterranean is:

(18) Lack of connection to an ecosystem of entrepreneurship, research and innovation.

When there are no relationships between the players and no entrepreneurship impact from the outside, in fact there is no learning. This obstacle actually points to the fact that local authorities must encourage mutual learning and fertilisation.

The special Case of COVID-19

The unique case of COVID-19 created many difficulties for local authorities and for all of us as a society. The good thing to come out of it is that it accelerated digitalisation processes, forcing local authorities, businesses, schools and every life-loving organisation to quickly enter the digital world. In this area too, we wanted to learn from similar local authorities as to whether they created channels of open dialogue with local businesses, with an emphasis on SMEs.

Does it operate an open channel with small-medium sized businesses, particularly in times of crises, such as during the COVID-19 epidemic?

Most of the municipalities did operate an open channel. Those that didn't did so because it was under the government role. Open channels were mainly to support SMEs with problems arising from the COVID-19 epidemic, by setting up a specific call number in order to help with:

- Online support for digital transformation, innovation, and internationalisation,
- specific calls to foster digitalisation of businesses and by providing contributions upon simple request to all regional businesses, commercial and artisanal activities in order to alleviate the weight of the economic losses caused by the lockdown,
- support with a local product label in a "short system" in order to consume locally.

Recommendations (How Is It Actually Done?)

At the end of the day, the responsibility lies with the mayor. It is up to the mayor to decide, lead, effect change and formulate a new agenda. Above all, the mayor must take responsibility for businesses in its jurisdiction, be familiar with their operation, and help them move quickly into the digital age.

The following is a plan that every local authority should adopt. It is an implementation guide of 10 steps to promote and reinforce businesses and help them in their digital transformation journey.

1. **The mayor must make a decision and formulate a vision** – this is the first step in the process and demands a clear understanding of the following question: "Why do we want this?"
2. **Appointment of a person in charge of businesses** – this must be someone who can put businesses on the municipal agenda in conjunction with the local authority or council. Budgets or partnership with the state should also be procured so that the authority does not have to "foot the bill" alone.
3. Mapping all SMEs in the city – this is the ability to assess all businesses in the city, understand what they do, how many are already digital and in which sectors. It is critical to map and understand the target audience and to measure the basis for the process.

4. Mapping SMEs challenges – this includes specification of the challenges that arise from the field and which preoccupy business owners, including the reasons why they have not yet gone digital. The proper implementation of this stage enables rapid and focused responses.

5. Specification of the main obstacles – only after listening to businesses is it possible to start mapping the main obstacles. Eighteen obstacles are mentioned in this document; there are surely many more. The main question is: what are the pain points in your city?

6. Formulating a dedicated work-plan – while at the same time appointing an administrative group to lead the process. It is possible to create a forum of businesses owners that can provide advice, or foster collaborations between businesses, present value propositions to them, and create tracks that help businesses that come to the city (green track to regulation) and want to embark in the digital journey (how should they do the transition quickly).

7. Presenting the programme to the mayor – this step includes presenting the plan and starting the journey after formulating clear roles and responsibilities and consolidating the proper budget.

8. Building an innovation ecosystem – to build an innovation ecosystem, it is necessary to decide on the core subject that will be the focus among businesses in the city and the main driver for attracting new enterprises while promoting citywide topics. The ecosystem must rely on the strengths of the city and its industry and can be sector focused while connecting other partners and businesses.

9. Measuring and controlling the transition to digital – defining the basic elements of the third stage will constitute the framework for assessing progress from time to time and the ability to help businesses in their transition to full online operations.

10. Connection between all city divisions and to the national government – this is critical for joining the various divisions of the local authority while, at the same time, learning and sharing knowledge with similar authorities in Israel and worldwide.
